Introduction
BRE Global Ltd, based in the UK near London, is an independent third party organisation offering certification of fire, security and sustainability products and services to an international market. LPCB is the certification brand used for fire and security products and services. The LPCB mark is accepted worldwide. We have representative offices in China, India and Dubai. We are owned by the BRE Trust, a not-for-profit organisation.

LPCB listings can be accessed, free of charge, at www.redbooklive.com.

RE Global additionally carries out:
- Fire Investigation
- Fire Risk Assessment
- Fire Safety Engineering
- Research
- Training

LPCB Listings

Listings are given in sections which list related groups of products and services such as suppression, security and so on. Each section also summarises the technical basis for the certification of each product or service. The Red Book listings should always be used in conjunction with rules, regulations and design specifications required by the relevant Authority having jurisdiction.

Listings comprise:

Volume 1:
- Fire detection and alarm products, systems, and cables
- Manual fire extinguishing equipment
- Automatic sprinkler, water spray and deluge systems
- Fixed fire fighting products and systems
- Watermist systems
- Related installers

Volume 2: (This Volume)
- Passive fire protection products
- Security protection products
- Fire doors and shutters
- Smoke and fire ventilation systems
- Security Assessments - SABRE
- Related installers
- Management Systems
- Construction products

Listings are given in the name of the manufacturer or service provider, in alphabetical order. They can be downloaded free of charge from our website at www.redbooklive.com.

Updates
Certification of products and services are updated regularly. To ensure that you are using the most up to date information please refer to <<<<<<<<www.redbooklive.com>>>>>>
What is Third Party Certification?
A frequent concern of stakeholders is in knowing whether a product will perform in accordance with the stated specifications. These concerns can involve such product attributes as safety, health or environmental impacts, durability, compatibility, suitability for intended purposes or for stated conditions, and other similar considerations. These issues can all be addressed through product certification.

Third party certification is a conformity assessment process, carried out by a body that is independent of both supplier and customer organisations. It provides confirmation that products and services have met and will continue to meet the requirements of specified standards and other normative documents.

LPCB third party product certification schemes are quality assurance schemes and comprise initial type testing and technical evaluation, assessment and surveillance of the manufacturer’s quality system and factory production procedures, regular audit testing, labelling and listing.

Similarly, LPCB schemes for suppliers of services (installers) are also quality assurance schemes comprising a technical assessment of an installer’s capability, assessment and surveillance of the installer’s quality system and production procedures, regular inspection of completed installations and listing.

Benefits of Third Party Certification
For specifiers, regulators, insurers, manufacturers and installers, the benefits of an LPCB approval are:

For specifiers and regulators:
- Risk reduction - specifying LPCB approved products and services demonstrates due-diligence and best endeavour and mitigates against possible accusations of negligence.
- Avoidance of costly mistakes - you can trust LPCB approved products and services to conform each and every time.
- Time - using Red Book Live to search for and assess products and services can save you time.

For manufacturers and installers:
- Increased global sales - LPCB approval is recognised and specified widely throughout the world. In some territories LPCB approval is a mandatory requirement.
- Added value of the product or service - LPCB approved products and services are recognised as providing added value given their ability to conform each and every time.
- Reduced liability - LPCB approved products and services demonstrate due-diligence which can reduce liability for both you and your customers.

What does LPCB Certification offer?
LPCB certification is carried out against Loss Prevention Standards (LPS’s). These LPS’s include reference to BS, EN or ISO standards as appropriate. LPCB certification are level 5 schemes as detailed in ISO/ IEC 17067 with the added requirement to have a quality system certificated to ISO 9001.

The technical requirements of LPCB schemes are given in the Loss Prevention Standards (LPSs). These documents are drafted by LPCB technical experts in conjunction with appropriate external experts. They are then peer reviewed by representatives from trade bodies, regulators, insurers, specifiers, manufacturers and other suppliers. Finally these documents are approved for use by the BRE Global Governing Body; the Body that oversees all of the certification activities of BRE Global.
Product schemes comprise:
- Initial type testing and evaluation of product.
- Approval and surveillance of the manufacturer’s (or supplier’s) quality management system to ISO 9001.
- Assessment and surveillance of the manufacturer’s (or supplier) factory production control system (FPC).
- Periodic audit testing of the product from either the factory or marketplace.
- Labelling or marking as appropriate.
- Listing on Red Book Live.

Installer schemes comprise:
- Technical assessment of the installation contractor’s capability.
- Approval and surveillance of the contractor’s quality management system to ISO 9001 or assessment against the requirements of the relevant Loss Prevention Standard where ISO 9001 is not appropriate.
- Regular surveillance inspections of on-going installations.
- The issue of Certificates of Conformity by the installer to demonstrate compliance for each installation.
- Listing in the Red Book.

The LPCB Mark - the Mark you can trust
After certification of a product or service the manufacturer or service provider may place the LPCB certification mark, as shown below, on the product, packaging and literature etc.

Where LPCB holds accreditation through the United Kingdom Accreditation Service (UKAS), the certified company may include the UKAS symbol (the Crown and Tick) alongside the LPCB mark for certain applications e.g. promotional literature or material and stationery, as shown below.

(Full details of LPCB accreditation can be found on the UKAS website at www.ukas.com)
Where for reasons of space or cost the use of the above full mark is not practical, then the following simplified mark may be applied directly to the product (for some schemes only). The LPCB scheme rules define how and where the marks can be used.

The products listed in Volume 2: Part 5 - Construction Products, are approved under our BRE Global Certification brand - the certification mark for this brand is:-

MANAGEMENT SYSTEM CERTIFICATION
INTRODUCTION

We offer approval to the three key management system standards for:

Quality - ISO 9001
Now one of the world’s leading management system standards, ISO 9001 gives confidence to customers that the businesses they trade with have consistent levels of quality and service.

Environmental Management - ISO 14001
Approval to ISO 14001 demonstrates a company’s commitment to the environment and provides an assurance to the public, regulators and purchasers that its environmental policies and procedures are effective.

Health and Safety - BS OHSAS 18001
This is a specification that helps to fully integrate health and safety into company policies and working practices. It also signals to architects, clients, insurers and specifiers that a company takes its health and safety responsibilities seriously.

As well as providing approval to each individually, we offer an integrated service to companies wanting approval under two or more of these management system standards.
Approval of a Quality Management System demonstrates that a company’s internal systems and processes are in place and operating as intended. It also measures performance in delivering products or services to an agreed standard.

Third party approval is an independent review of a particular area of a company’s activities, which leads to improved processes and increased consumer confidence, and can help to reduce costs. Under the International Standard, ISO 9001, the certificate identifies which parts of a company’s activities are covered, and must include design if this is part of its operation.

This scheme is for companies whose Quality Management Systems have been designed to meet the requirements of ISO 9001. For companies that already have a certificated Quality Management System assessed to ISO 9001, we offer approval of the factory production control processes applicable to the products we approve, and these are detailed in the entries listed where that option has been taken.

The entries in this section define the scope of activities that have been assessed under the management system.

Unlike our product approval schemes, which relate to specific products and services, Quality Management Systems approval can encompass the complete scope of a firm’s activities at that particular address. However, it is important to understand that ISO 9001 does not provide an assurance to the user or specifiers that actual products or services conform to requirements, since no testing or cross checking of conformity to product or service standards is involved. Therefore, no marking of specific products or installations is permitted.

For companies operating in the fire and security areas with LPCB product or service approvals, our ISO 9001 approval is given in the name of LPCB (see section 1.1). Where companies do not require LPCB product or service certification, then all certificates are issued in the name of BRE Global Limited (see section 1.2).
The following companies have ISO 9001 with LPCB.

Businesses face a growing number of environmental pressures including:

- Energy prices
- Water prices
- Concerns from the public about pollution, climate change and resources
- Legislation
- Environmental Taxes (climate change levy, landfill tax etc)
- Waste disposal
- Environmental impact assessment
- Prosecution

ISO 14001 is a clear way of demonstrating a company’s commitment to the ‘green’ culture, and provides an assurance to the public, regulators and purchasers that the environmental policies and procedures the company puts into place help to:-

- Address public concerns
- Reduce risk of legal non-compliance (Environmental Protection Act 1990 and a whole host of others)
- Reduce costs and tax burden (Climate Change Levy and rebates)
- Improve reputation and marketability
- Manage environmental performance

Assessment and evaluation of environmental management systems can lead to products, systems and services that directly improve the quality of life through cleaner, safer and healthier environments.

For companies operating in the fire and security areas with LPCB product or service approvals, our ISO 14001 approval is given in the name of LPCB (see section 2.1) Where companies do not require LPCB product or service certification, then all certificates are issued in the name of BRE Global Limited (see section 2.2).
The following companies have ISO 14001 approval with LPCB.

Health and Safety is a critically important issue for all businesses. It has moved beyond simple compliance with the law and is now part of the Corporate Social Responsibility agenda. Poor Health and Safety performance means loss of reputation, loss of license to trade, lost business and huge extra costs. Good performance reduces costs and gives you competitive edge.

Whether you are an employee, a manager or a business owner, you share a common goal - you don’t want anyone to get hurt on the job. Improved productivity stems from ensuring people operate in workplaces that provide transparency and build trust throughout their operation and supply chain. In addition, responsible practices are becoming increasingly important to brands and reputations.

ISO 45001 is the new ISO standard for occupational health and safety (OH&S).

**Why Certification to ISO 45001?**

To survive in today’s competitive global marketplace, organisations must proactively manage all types of risk to the business, and the issue of occupational health and safety is no exception. ISO 45001 will provide new impetus for occupational health and safety practices in organisations and will help improve safety for employees and contractors. This translates into additional opportunities for protecting and promoting worker’s health and performance, as well as a sustainable improvement of employee motivation.

It helps confirm that policies and procedures are in place to identify applicable legislation and regulatory requirements, and how these are implemented and maintained.

Through our work we have developed an in-depth industry knowledge in manufacturing and contracting activities for the construction, fire and security industries. Our certificates are maintained through regular assessment visits and are listed here on this website.

**Due to the recent Pandemic restrictions the date for migrating Certification from BS OHSAS to ISO 45001 has been extended to 30th September 2021.**
